

Asystek's Project Management Solutions

Utilizing intelligent analytics to effectively deliver project success.

Project Management's Challenge

Despite the evolution and maturation of the project management discipline, organizations continue to struggle with the unique challenges of large-scale and complex information technology projects and business process improvement initiatives. The reason is simple – PMs are not equipped with the proper analytical skills and mindset required to be successful in today's data-centric world.

The Asystek Solution

Leveraging extensive PM expertise and experience, Asystek has developed a PM solution set that offers a different perspective – one that stresses empirical decision making to achieve project goals.

1. Data-driven Project Management

Our core PM solution is powered by our **data4impakt™** service and predicated on applied best PM practices that have been tailored to meet our data-driven philosophy. Our PM solution is a scalable, command and control framework designed to support the project life cycle from definition and planning through management and execution.

2. PM Supplemental Staffing

Whether PMs or PgMs or PfMs, Asystek can deliver the right PM resources at the right time with the right skills and the right perspective to give you the flexibility to meet the shifting resource demands of complex transformation initiatives.

3. PM Center of Excellence (COE)

Enabled by our **data4impakt™** service, Asystek's PM COE solution helps you deploy a formal project management competency and provides the organization, skills, processes and tools necessary to support ongoing demands, meet evolving PM needs and establish a foundation for delivery success.
